

Why Do I Need an AGM Battery?

Many factors such as vehicle systems, driver behavior and operating environment (cold vs. warm climates) increase electrical demand on your vehicle's battery. AGM (Absorbed Glass Mat) batteries meet the many electrical demands of modern vehicles.

- Using a flooded battery in vehicles with Start-Stop technology could lead to premature failure.
- Stop/Start technology requires an AGM battery.
- Traditional flooded batteries cannot charge fast enough or cycle (drain/recharge) often enough to keep up with Stop/Start technology
- If your vehicle was built with an AGM battery, it needs to be replaced with an AGM battery

Testing is Key!

Batteries can fail without much warning. In modern vehicles, you may not get a slow crank sound as a warning, it just won't start if the battery voltage is too low.

One of the simplest things to do is check the health of your battery by having it tested by your local GM dealer.

The recommended choice when a replacement automotive battery is needed.

ACDelco Gold 36-Month Warranty AGM Batteries are a high-quality replacement for Original Equipment (OE) batteries.

The choice when a blend of durable performance and economical price is what you're after.

ACDelco Silver 24-Month Warranty AGM Batteries are a quality, high value alternative to Original Equipment (OE) batteries.

*Replacement limited warranty to the original retail purchaser. See gmparts.com/warranty for details.
